DETAILED ACTION

Restriction/Election Requirement

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-8 and 17-19, drawn to a method and computer program product for executing the method for analyzing chemical data, classified in class 702, subclass 19.
- II. Claims 9-16 and 20-22, drawn to a method and computer program product for executing the method for analyzing chemical data, classified in class 702, subclass 19.

The inventions of groups I-II are independent/distinct, each from the other because of the following reasons:

Inventions of groups I and II are directed to related processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the methods of group I and II are related because they are both used for analyzing chemical data. However they are distinct because they comprise distinct steps. Group I involves clustering analysis using a distance metric of a form defined in the formula of claim 1 whereas group II involves clustering analysis using a distance metric of a form defined in the formula of claim 9, which is distinct from the formula defined in claim 1 because they comprise different factors, variable and different calculations. The two formula are not disclosed to be used together. Clearly the methods are mutually exclusive, not obvious variants and have different modes of actions, functions and effects.

Because these inventions are independent/distinct for the reasons given above, restriction for examination purposes as indicated is proper. And because the different clustering methods in the two groups required distinct search for the different factors, variables, etc., it would require different search strategies for searching the two groups. Thus, it would impose serious search burden to the Office if both groups are examined.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
